### The client.

A leading investment firm based at Maple House in Central London aimed to refurbish their basement level to include staff changing rooms and convenient, accessible storage for employees throughout the building.

## Case Study

## The project.

Located in the heart of the city, our client sought a secure and innovative storage solution for employees who commute by bike.

Their goal was to offer a safe, convenient space for both bicycles and personal gear while streamlining storage management with real-time data and utilisation insights.

The Simplicity+ system proved to be the ideal fit. In collaboration with Faithdean Plc, we transformed their basement into a smart storage hub, installing Simplicity+ changing room lockers and Brompton bike lockers that seamlessly integrated with their existing IT infrastructure.

Designed as a custom solution, we installed sleek black lockers with direct-to-door access, delivering both flexibility and ease of use.

The bike lockers, built from durable, powder-coated metal, ensure lasting protection against wear and moisture, enhancing both function and form in this upgraded workspace.

### The results.

The transformed basement now offers a modern, secure space that enhances employee convenience and peace of mind, knowing they have a safe place for their bikes and personal items.

Real-time data on locker usage empowers senior leadership to make informed decisions on space management, while the sleek, professional design adds a polished touch to the workplace environment.
