Sustainability

Building a greener future

Our commitment to **sustainable** innovation.

At Your Workspace, sustainability is
at the heart of every decision.

From design and materials to
logistics and installation, we embed
environmental responsibility into
every stage of our process.

100% UK manufacturing

All products are made within a three-hour radius of London to minimise transport emissions and support the local economy.

Low-impact logistics

Up to 90% of our products are London-based, and our in-house teams are never more than an hour away, reducing carbon emissions.

Sustainable materials

We prioritise recycled, recyclable and responsibly sourced components.

Zero-waste packaging

Shrink wrap is biodegradable, cardboard is fully recyclable and edging protectors are re-used.

Waste to energy

Any manufacturing waste is converted into energy to power our factory.

Sustainability.

It's **more** than just a word.

We have partnered with EGGER, the leading brand in wood-based products, to pursue a shared vision and values.

Together, we are committed to sustainability.

Circular **economy.**

Unlike traditional fitted storage solutions, our modular products are designed to move with you.

- Deconstructable, relocatable and reusable
- Upgradeable technology and locking systems
- 10+ year product lifestyle
- Keep the carcass but refresh the doors
- Over 95% of components recyclable
- Software components are re-used

simplicity

Less **waste**, more **impact**

Our award-winning Simplicity smart lockers are the definition of sustainable engineering.

Still in use a decade on, with systems installed as far back as 2014, they are designed to adapt, evolve and perform with minimal maintenance.

**Remote
management**

**Less raw
materials**

**Up to 40%
fewer lockers**

Responsible use of raw material wood

Sustainable forestry

Wood from 100% verified legal and controlled sources according to ISO 38200.

Sawmill by-products

Innovative sawing technologies that merges timber production with chipboard, MDF and other wood-based products.

Production and processing

Supplier partnerships with internationally certified energy and environmental management systems in accordance with ISO 50001, ISO 14001, and EMAS.

Planning and application

Full transparency with Environmental Product Declarations (EPDs).

Recycling

Recycling waste wood onto the production of wood-based materials such as pallets, furniture or packaging.

Renewable energy

Converting wood residues that can no longer be used as materials in production into fuel for our factory.

Charitable redistribution

Our products are built to last, but when they're no longer needed, we ensure they continue to create value elsewhere. Through partnerships with organisations such as Waste to Wonder, we collect unwanted lockers and redistribute them to schools, charities and community projects in developing countries.

This not only helps avoid landfill and unnecessary waste but also supports global education and infrastructure initiatives. By giving products a second life, we significantly reduce CO₂ emissions while contributing to meaningful social value projects.

Environmental credentials

Our environmental policies are officially recognised by external industry regulatory bodies. We are certified to the Environmental Management standard ISO14001, which confirms that we effectively monitor and manage our environmental impact and carbon footprint with a view to continuously improve.

We also hold the Gold Standard Certificate and Forest Carbon certification, which support our commitment to measuring our carbon footprint and achieving net zero. Other key measures in which we strive for the best possible rating in respect of our products' contribution in whole-building assessments are BREEAM, WELL, SKA and LEED.
